Local Care for Local People since 1982

Is the person in your care at risk of developing a pressure ulcer?

Do you know how to recognise if they are at risk of this?

Pressure ulcers (also known as bed sores) can lead to an open wound, be painful and even result in sepsis. However, they are usually preventable.

If you're caring for someone why not attend this free workshop and find out more about how to prevent pressure sores. The session will be led by Heidi Sandoz, Tissue Viability Services Lead at Hertfordshire NHS Community Trust.

To book your place please:
